

A WOMAN WHO BECAME DOUBLE NOBEL PRIZE WINNER

Long time ago, females and males did not have the same rights. At this time, woman had to do extraordinary things to be noticed. Woman wanted to be respected in the field of science and policy. Hopefully this changed because of awesome woman actions.

One of woman, who proved that woman and man are equal, is Maria Skłodowska Curie. Maria, was the first woman, who won a Nobel Prize. She was also the first, and only person who won Nobel Prize twice, in two scientific fields (chemistry and physics). She was born in 1867 in Warsaw (part of Russian Empire). She studied at Warsaw Flying University. When she was 24, she moved with her sister, to study in Paris. She married a French Physic. And she shared with him the 1903 Nobel Prize in physics, for their theory of "radioactivity". In 1911 Marie won second Nobel Prize in chemistry for her discovery "polonium" and "radium".

Marie's success motivated woman all over the world. She show that everybody even woman, can change the world. She did something amazing ! she proved that woman and men are equal. She became international inspiration. After her success woman started do unconvinced things, they were not damping anymore. She showed her braveness and unpredictable thinking, she also proved that hard work is worth sacrifices.

Marie is my biggest inspiration, because she changed people's mentality. She also showed that despite adversities I can not give up on my dreams. Because I can achive anything with hard work If I want to.
