

# My story

I love to study history especially ancient Egyptian history. The way they created one of the first civilizations in the world. Also, they developed it in all fields and discovered many kinds of science. Also, they built huge pyramids, palaces, temples and tombs. It is not only architecture that was famous for them. One of the things they are famous for is agriculture. Egypt's moderate, dry climate helped them expansions

n in the Delta and the Nile valley. However, the diversity of crops made them a global distribution point for crops.

The civilization of ancient Egypt was divided into eras, and each eras has times of weakness and times of strength. Every king in these eras was famous for something specific. Some of them were known for architecture, some of them left monuments that tourists could visit until now. Also, some of them showed military superiority and extended the borders of the country to Asia.

I always dreamed of living in this period of time. A time when my ancestors colonized most of the Earth and developed it and be a witness to it, not only I hear about it from books and antiquities. People have not discovered most of the secrets of the ancient Egyptian civilization so far, and many things are still unknown. Such as the secrets of mummification, building the pyramids without modern machines that help them. And the dagger of Tutankhamun made of stones that are not on Earth.

One of the most important kings of ancient Egypt is Ramses II. One of his most important achievements was the construction of the Karnak Temple and Abu Simbel. He led military campaigns to the Sham, the most important of which was the battle of Kadesh which returned the Sham through it to Egypt. Also, he is the owner of the first military plan in history.

All these factors made the pharaonic period closest to my heart in the history book. Also, it was the first thing that came to my mind when I wanted to join in the story writing competition also this is a love story that will never end.
