

LITTER WASTE

FATIMA BEGUM
DATE: 12 MAY 2023

Introduction

Throwing trash of small amount in the places where it does not belong.

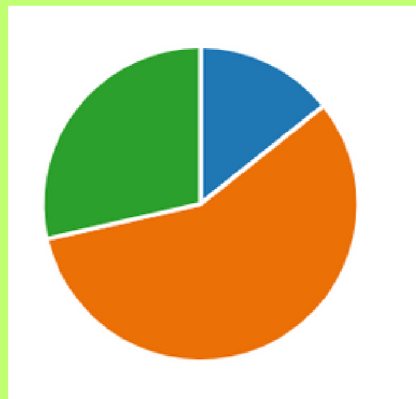

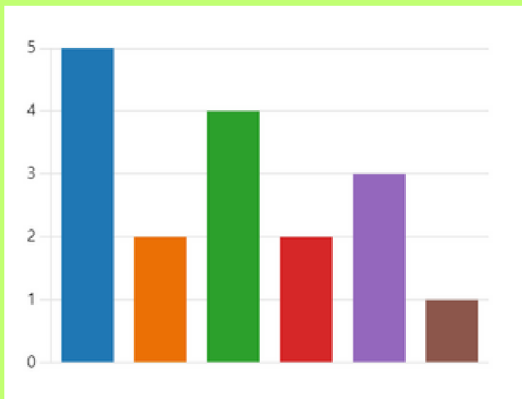

The aims

Recycling prevents the emission of many greenhouse gases and water pollutants, and saves energy. Using recovered material generates less solid waste.

Why recycling is important?

Just because of save our environment, save money , clean area. In my survey some people said for save environment, save money, kill animal.

We used MS forms for conduct the survey.

70% people said they do recycle every week, 20% people said they do recycle twice in month. And 10% people said they do recycle sometimes.

Again 50% people said they do recycle plastic. And other 50% said they do recycle wood, metal, paper, glass.

In my opinions, recycling reduces waste sent to landfills and incinerators. If we improve litter waste then we need to do recycling in every week. Otherwise climate change and plastic pollution will rise.
