

Litter Waste

Megija Ivanova | 12 May 2023

Introduction

The aim of this report is to highlight the importance of recycling and to see how many people recycle. Throwing plastic in water and papers on the ground is not good.

The Aims

Recycling prevents the emission of many greenhouse gases and water pollutants and saves energy. Using recovered material generates less solid water.

Why is recycling important?

Recycling is important because there will be no dirty streets, animals can swim in the water, we save money by using one bottle two or three times.

We used MS forms to conduct the survey.

In my opinion, recycling reduces waste, and it is sent to the laboratory to recycle used bottles, used paper and all other things. If we want to improve litter waste, then we need to recycle every week.
