Litter Waste Report

Introduction:

The aim of this report is to reduce litter in Bradford and make our city cleaner and safer together. Our class did a survey by using MS Forms and we asked students at Bradford College what they think about recycling litter.

Importance of recycling:

It helps reduce the need for harvesting raw materials, save energy, prevent pollution, and reduce greenhouse gases.

Benefits of recycling:

- Recycling prevents pollution.
- Recycling conserves natural resources.
- Recycling conserves energy.

Litter waste is a survey to know how many percent of people recycle litter. We used MS forms to ask people some questions about recycling methods, whether they recycle or not. The questionnaire aims to identify the percentage of people who recycle waste, food, cans, bottles or wood.

This positive response shows that people are interested in recycling. 100% of people said that they recycle.

Here 50% of people said that they recycle once a week and 50% of people said that they recycle twice a week.
